

Franke Coffee Systems The art of excellent coffeemaking

bremer Fully Automatic Coffee Machine VIVA XXL

Microprocessor-controlled coffee machine for producing large quantities of filtered coffee (brewed coffee) and hot water.

Design:

All major parts are made of high-grade stainless steel. Housing parts and ground coffee container are both made of easy-care plastic. Non-return valve and VDE safety temperature limit switch. The machine carries the CE mark, is suppressed (shielded) and VDE tested. Modularly designed and equipped with LON Works network standard.

Features and equipment:

The fully automatic bremer brewing process allows you to select among 4 different brewing levels -- 1, 2, 3 or 4 litres. The freshly brewed coffee is optimally stored in a built-in 4-litre glass container. If the storage level drops below a certain minimum, automatic brewing takes place to replenish the amount in accordance with the selected brewing level. Single cups, small pots, pots or jugs of filtered coffee can then be drawn from the machine. Products are served automatically after pressing a product button.

Independent of coffee preparation, hot water can be dispensed using a separate dispenser tap. Ground coffee and brewing water quantities can be individually set for each product. The fully automatic machine has 4 product buttons; these can be individually programmed and assigned for cup, small pot, pot and jug. The maximum positioning height is 185 mm and thus accommodates a commercially available glass pot or a convenient VIVA Thermo Spherical Pot (extra charge) with a filtered coffee capacity of about 1 litre, or the coffee can be dispensed via a special jug outlet (extra charge) into a large thermos that can then be served on a practical tray (optional). All served beverages are shown in the display, are registered and can be called up, and are safeguarded with a PIN code in the settings menu.

The coffee machine has a ground coffee container with a large capacity of 3 kg in total. Cleaning the coffee preparation system is done by starting up the automatic cleaning program that is part of the standard equipment.

Technical data:

Hourly performance:	400 cups of filtered coffee 20 litres of tea water
Serving performance:	560 cups / hr.
Brewing levels:	1, 2, 3 and 4 litres
Content:	4-litre brewing vessel 4-litre storage container 3-kilogram ground coffee container
Connection values:	9.5 kW 400 V 3 N AC 50 Hz
Dimensions:	360 x 560 x 840 mm (W x D x H)
Article no.:	bremer VIVA XXL 980056
