Franke Flair F 2M HD CE2

The Franke Flair F 2M HD CE2 is a microprocessor-controlled, fully automatic coffee machine with 2 coffee grinders for custom coffee specialities such as ristretto, espresso, caffè crème, white coffee, latte macchiato, and cappuccino. It also dispenses hot milk, hot water and steam.

Technical data

<u>Spot performance:</u>	Espresso:	2 cups / min.
	Caffé crème:	2 cups / min.
	Cappuccino:	2 cups / min.
	White coffee:	2 cups / min.
	Latte macchiato:	2 cups / min.
	Hot milk:	2 cups / min.
	Hot water:	2 cups / min.

<u>Power rating:</u>	Coffee machine: 2.3 kW
<u>Power connection:</u>	Coffee machine: 230 V 1LN PE, 10 A, 50 Hz
<u>Water supply:</u>	Side water tank with 5.5 litre capacity
<u>Waste water:</u>	Drip tray, monitored, 1.5 litre capacity
<u>Weight:</u>	18 kg
<u>Dimensions:</u>	Width: 423 mm
	Height: 523 mm
	Depth: 542 mm

Design

All major parts and housing parts are made of easy-care plastic. All components relevant to safety have been certified by the responsible certification authorities. The machine carries the CE mark and is EMC and CB shielded and tested.

Special features

The coffee machine is equipped with 2 low-noise precision coffee grinders (bean container capacity each 250 g).

There are 8 individually programmable product buttons plus separate hot water and steam buttons.

Operator guidance, settings and the status displays are shown on the 2-line, 16-character LCD. The preselected products are displayed by means of the LCD.

The height-adjustable dual coffee dispenser makes it possible to use different sized cups, jugs and other vessels up to a maximum height of 150 mm. The 2 milk frothers integrated in the dual coffee dispenser ensure trouble-free preparation of all popular coffee specialities.

Metered hot water and steam are dispensed from separate outlets.

Preparation of coffee specialities is based on the espresso process. Coffee specialities can be freshly prepared as needed for single or tandem cups. The milk is heated or frothed by the milk frothers integrated in the coffee dispenser and served with the coffee in one work process. The sequence in which the milk is output -- whether before, while or after the coffee is output -- can be programmed. The coffee beans are freshly ground automatically after pressing a product button. After brewing, the dry coffee grounds are collected in the built-in grounds tray (up to 40 portions).

Customer settings

The user can quickly set important parameters such as the quantity of ground coffee and water in a matter of seconds. And settings can be corrected just as quickly. Access rights to the customer settings can be individually defined and saved with a PIN code.

Billing systems

The coffee machine can be prepared for connection to commercially available payment and billing systems. Also, internal counters keep track of output (total count, count per product, etc.).

Cleaning and hygiene

The integrated automatic rinsing, decalcification and cleaning program for the coffee and milk area makes it easy to maintain and care for the unit while ensuring excellent hygiene and consistently high quality coffee.

Standard equipment

- Fully electronic control system with illuminated LCD
- Separate hot water and steam outlets
- Plastic brewing assembly
- 1 unit heater for coffee and hot water
- 1 unit heater for steam
- 2 low-noise precision grinders with direct grinding
- 2 coffee bean containers made of plastic, 250 g capacity each, monitored fill level
- Adjustable coffee dispenser from 75 to 150 mm
- 2 integrated milk frothers
- 8 selector buttons for coffee and milk products
- Dry coffee grounds discharged into a tray for 40 portions, electronic overfill safeguard
- Plastic housing in black

Options

- Permanent water supply connection
- Grounds chute for direct disposal into a waste bin installed under the counter
- Plastic housing in silver
- Lockable bean containers, 500 g each
- Connection to commercially available payment and billing systems

Accessories and add-ons

- Fridge
- Cup warmer
- Chocolate beverage dispenser
