

The Spectra expands along with your needs: Add-on options.

The Spectra is as unique as you are. But that's not all: with the practical add-on units and milk solutions there are even more possibilities for you to choose from. So when it comes to enjoyment through refinement, the Spectra is in a class of its own.

More than just extras: Add-on units.

Refrigeration unit for fresh milk

The refrigeration unit keeps 10 litres of milk (or 2 times 5 litres when using two different types) at the optimum-chilled temperature. It can be installed either to the left or right of the Spectra S. The refrigeration compartment holds both Bag in Box containers and bottles. The refrigeration unit is simple to clean. The milk quantity and temperature are monitored both visually and acoustically. Option: lockable door.

Billing unit

This add-on unit can be integrated into all commercially available systems. As an option the Spectra can be combined with a dispensing and billing device of your choice. For example:

- Coin validator
- Coin changer
- Prepaid cards
- Waiter control system etc.

Cup warmer

For longer-lasting coffee enjoyment. The cup warmer makes sure that the ideal (adjustable) cup temperature is kept constant and stores up to 120 cups on three shelves.
