

Diversity through technology: Four perfect brewing methods.

The Spectra adapts to any situation. That applies to the brewing technology, too. Choose the optimum method for optimum taste enjoyment. After all, the genuine art of coffee making is to be celebrated.

The essence of coffee competence

The newly developed ENB® brewing system pools all the know-how of optimised solutions and decades of experience acquired by both Franke and bremer. And we don't mind admitting we're genuinely proud of the results!

More specialities, more flexibility

Choose the ideal brewing unit depending on your area of application and market. If you're using two machines, you can optimise your equipment to produce a wide range of coffee specialities. If your requirements change, all you need to do is have the brewing systems replaced quickly on site.

ENB® 43 E espresso brewing system

The ideal solution for the classic espresso and perfect milk and coffee specialities.

ENB® 50 E espresso brewing system

Consistent in quality, power-packed for high outputs.

ENB® 50 N needle filter brewing system

A unique combination: espresso and single-cup brewed coffee from one and the same machine.

ENB® 50 B high-output brewing system

The brewing unit that carefully brews large quantities of coffee (available only with the Spectra X).
