

## Indispensable: Intelligent milk solutions.

Coffee and milk simply go together. And where milk is concerned, hygiene is as crucial as simple processing. Whether you're using fresh milk or powdered milk, your guests expect the very best – and they won't be disappointed.

### Preparing fresh milk with a system

The milk dispensing head is integrated into the coffee machine's dispenser system. That means you can dispense both coffee and milk at the same time. And you get to choose whether to dispense the milk before, with or after the coffee.

The compressor refrigerator stores 10 litres of milk in perfectly fresh conditions (or 2 times 5 litres when using two different types of milk). The milk system is available as an individual solution with a flexible connection either under the counter or to a milk drawer.

The integrated pump, which is controlled electronically and adapted to the programming of the coffee machine, ensures that the cold or hot milk is dispensed in precise doses.

The certified ARCS® programme (short for Automatic Rinse & Cleaning System) for the coffee and milk unit greatly facilitates both maintenance and care. It guarantees that the milk is processed perfectly every time. The entire fresh-milk system is rinsed automatically at regular intervals pre-programmed by you. The dispenser head is easy to remove and clean – no customer service required.

### Advantages at a glance

- Cold-milk dispenser
- Adjustable milk temperature
- Consistent dosing
- Automatic cleaning and rinsing programme ARCS®
- Level monitoring on the display
- Milk products halted when the milk container is empty
- Suitable for self-service and for connection to billing systems
- Cup monitoring (self-service)
- External no-milk indication (self-service)
- Refrigeration chamber temperature indication on the display

### MUT® (Milk-under-Table)

Ideal whenever space is at a premium: with the MUT alternative you can store a 10- or 20-litre milk container in your existing refrigerator under the counter. The use of BIB containers is also possible. By installing a second pump you can process two types of milk or supply two machines at the same time.

### Powdered milk

By installing a container for powdered-milk topping in the Spectra S you can prepare all popular milk specialities even without fresh milk; ideal for vending applications.
